

COBERTURA ELÉCTRICA DE GUATEMALA

Fórmula:

$$\% \text{ Cobertura} = \text{Hogares electrificados} / \text{Hogares totales} * 100\%$$

Hogares Electrificados:

Los hogares electrificados son todos los usuarios del servicio de energía eléctrica conectados a una red de distribución y los hogares que poseen iluminación por medio de paneles solares

Para la obtención de los datos de los usuarios con servicio de energía eléctrica se requirió información a:

- EEGSA
- DEOCSA
- DEORSA
- Empresas Eléctricas municipales
- Ministerio de Energía y Minas

Los datos de hogares con paneles solares de energía eléctrica se obtuvieron de información publicada por el INE en el Censo del 2002.

Los datos sobre hogares conectados en zonas fronterizas se obtuvieron de las autorizaciones realizadas por el Ministerio de Energía y Minas para la asociación o consejos que están conectadas de esta forma.

Las siguientes tablas muestran los datos de los hogares electrificados (usuarios) al 31 de diciembre de 2008.

Hogares totales en el País:

En cuanto a la cantidad de hogares se tuvo como base la cantidad de hogares determinadas mediante el censo del 1994 y el censo 2002, ambas realizadas por el INE. Con estas dos series a nivel departamental se obtuvo una tasa promedio de crecimiento anual por departamento

Se estimo la cantidad de hogares para el año 2008 mediante el método de serie geométrica, en base a la tasa promedio de crecimiento anual por cada uno de los departamentos. Se aplico la misma tasa departamental a todos los municipios que pertenecen a cada departamento.

La siguiente tabla muestra la información de los datos del total de hogares existentes en cada uno de los departamentos en el censo 1994, en el censo 2002 y la estimación para el año 2008
